Dr Nassar,

You are the best professor I ever had in my life. The first when I was walking to XL 10 Physics class, I kept thinking how mathematical this class will be because I am a medical graduate and not a math one. After attending your first class I was shocked to find that Physics can be so interesting actually. I have finally realized that Physics is the language of the undiscovered and while I thought that Physics was all discovered and Einstein finalized it all, I was a frog in a pond while I thought that. Thanks to you that you can actually inform students that Physics is one unclaimed territory and for those lucky enough to jump and dedicate their life may contribute maybe at a time that others will actually understand( it maybe extremely rare but no one knows who a great mind maybe or may become). A great mind like Einstein struggled to prove his theory looking for a total eclipse to prove his theory. your concept of showing images and videos is unique and that makes your teaching style the best as far I can remember. My mind is fixed to follow my interests of Pharmaceuticals and i am moving to Pennsylvania to purse my interests further, I will still join and complete the 6 series you teach at UCLA. This will be purely out of interest, you are an Angel when it comes to Physics, an angel sent by the divine to create interest among your pupils in Physics. Thank you.

Sincerely,  
Dr. Harpreet Walia
